

This incredible patch makes hard, water-tight joints, may be mixed with an epoxy and will not stain marble or granite.

Sharp sand may be added to the powder when setting monuments and vaults.

The patch can be trimmed with a sharp chisel or knife.

Directions for Use:

For filling holes, mending broken edges or corners of stone, mix the powder with clean water to a thick paste. Clean the parts well on which the patcher is to be applied, then press the mixture hard to the stone. In a short time the patch may be trimmed with a sharp chisel or knife.

For setting monuments and vaults, use a little sharp sand with the powder. Will not stain marble or granite. Makes hard, water-tight joints.

CAUTION: Do not mix any more at a time than is necessary as the patcher sets very quickly. Do not patch frozen stone. To preserve the life of the material, keep lid on tightly.

NOTE: This product is used more for cosmetic purposes, not for flooring and such.
